

ABSTRACT OF THE DISCLOSURE

5 An umbrella having a sprinkler device comprises an umbrella body and a
sprinkler device. The umbrella body comprises a plurality of upper spokes and
lower spokes, an upper spoke holder, a lower spoke holder and a shaft
portion. One end of each upper spoke and lower spoke are respectively
engaged with the upper and lower spoke holder such that the upper and lower
10 spokes are radially disposed respectively. The other end of each lower spoke
supports the corresponding upper spoke. The sprinkler device comprises a
multi-link nozzle, a main hose, a plurality of tubes and spouts. One end of the
main hose connects with the primary nozzle of the multi-link nozzle. One end
of each tube connects with its corresponding secondary nozzle of the
15 multi-link nozzle, and the other end thereof connected with a spout. Water is
channeled through the multi-link nozzle to each tube and sprayed by each
spout.
